Customer Journey Map

Date	31 January 2026	**Team ID**	N/A – Individual Project
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report	**Maximum Marks**	2 Marks

Customer Journey Map – Using the Tableau Fuel Price Dashboard

This map follows an energy-policy analyst from obtaining the dataset to exploring the dashboard and communicating findings. It is a project-design persona based on the scenario supplied; it is not a record of an actual user interview.

Journey Dimension	Stage 1: Access & Prepare Data	Stage 2: Explore Dashboard	Stage 3: Interpret & Share Insights
Actions	• Receives or locates the fuel-price CSV dataset. • Opens Tableau Public and connects to the CSV. • Checks country, region, date and measure fields.	• Opens the dashboard and reviews the KPI cards. • Uses petrol and diesel maps to compare countries. • Explores yearly price trends and regional tax comparisons. • Checks Top 5 tax countries and the Canada–Mexico–US comparison.	• Reviews the story points in sequence. • Compares findings across maps, trends and tax charts. • Uses the conclusion to summarize the analysis. • Shares the Tableau Public workbook or presentation with stakeholders.
Touchpoints	• CSV dataset; Tableau Public Text File connection; Data Source page.	• Tableau dashboard; KPI cards; maps; line charts; pie chart; bar charts; country/year filters.	• Tableau Story; dashboard captions; Tableau Public share link; project documentation.
Customer Thought	• Are the fields recognized correctly? • Can I use the data to compare countries and years?	• Which countries have higher or lower average prices? • How do average prices change over time? • How does average tax differ by region?	• What are the main patterns in the dataset? • Which comparisons are useful for policy discussion? • What limitations should I mention?
Customer Feeling	• Interested but cautious about data quality.	• More confident when charts are clear; may need help interpreting unfamiliar measures.	• Prepared to communicate descriptive findings, while aware that charts do not prove causation.
Process Ownership	• Individual project analyst / Tableau workbook author.	• Dashboard creator / Tableau workbook author; viewer explores the published dashboard.	• Individual project analyst / presenter.
Opportunities for Improvement	• Check field types and geographic roles; document the data period and limitations.	• Use clear titles, units, legends and consistent AVG calculations; keep filters easy to find.	• Explain that the analysis is descriptive; avoid causal claims or unsupported forecasts; state the dataset date range.

Overall experience goal: Make global fuel-price and taxation information easier to explore through clear averages, country maps, yearly trend charts, regional comparisons and a guided Tableau story.
